

Microsoft 365 Personal AI OS

60 Copilot and Cowork prompts for focus, follow-through, learning and leadership

Observe. Prepare. Act. Follow through.

September 2026 edition

Arun Prakash Asokan
Global Director of AI

What this library gives you

This library turns Microsoft 365 Copilot and Cowork into a connected personal operating system across twelve categories. Each of the sixty prompts has a distinct task, source scope, output contract, proof test and approval boundary.

Mode	Use	Control
Chat	Focused request in Copilot Chat or an app	Review before acting
In-app	Work in Outlook, Teams, Word, Excel, PowerPoint, Loop or OneNote	Confirm the selected content
Cowork task	Coordinate multi-step work across Microsoft 365	Define permissions and approval points
Scheduled	Run a recurring briefing or review	Inspect early runs and tune noise
Event-driven	React to a matching signal	Use precise triggers and draft-and-approve

Five automations to consider

Prompt	Automation	Review rule
51	Scheduled morning brief	Check missed commitments and false assignments
52	Weekly portfolio review	Verify every changed status
53	Manager email trigger	Trigger only on an explicit request
54	Teams mention trigger	Suppress routine mentions and keep replies as drafts
55	OneDrive and SharePoint organizer	Approve the exact change list before execution

01 Daily leadership briefing

Category: Morning command centre | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Prepare my leadership briefing for [DATE]. Review email received since [TIME], Teams chats and meetings from the last 24 hours, today's calendar, flagged items and tasks due within seven days. Organize the briefing as: decisions I must make, commitments I owe, work blocked by me, material changes since yesterday and meetings that require preparation. For every item, include the source, why it matters, the next action and the latest safe completion date. Exclude newsletters, FYI messages and duplicated threads. Mark an item UNKNOWN when the owner or due date is not explicit.

Quality check Every item must explain why it belongs in a leadership briefing and link to one current source.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

02 Three outcomes for today

Category: Morning command centre | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Using my calendar for [DATE], unread priority email, open Planner or To Do tasks and commitments I made during the previous five working days, propose exactly three outcomes for today. An outcome must describe a completed result, not an activity. For each outcome, show the evidence that makes it important, the decision or dependency involved, the minimum next action, the time required and what I should deliberately defer. If the available hours cannot support three outcomes, propose two and explain the capacity constraint.

Quality check The proposed work must fit my available calendar time and every outcome must close a real commitment or risk.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

03 Decision and approval queue

Category: Morning command centre | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Find requests from the last [NUMBER] working days that explicitly require my decision, approval, confirmation or review. Search email, Teams messages, meeting transcripts and documents shared with me. Create a queue with: requested decision, requester, date received, business consequence, deadline, evidence still missing and recommended response. Separate true approval requests from FYI messages and requests already resolved later in the thread. Rank by consequence and deadline, not sender seniority.

Quality check No closed or superseded request may appear as pending, and every queue item must quote the explicit ask.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

04 Change and risk radar

Category: Morning command centre | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Compare work evidence from [CURRENT RANGE] with [PREVIOUS RANGE]. Identify only material changes in scope, dates, ownership, decisions, assumptions, dependencies or risk. For each change, show the previous state, current state, source for both, likely consequence and the person who should validate it. Separate confirmed changes from signals that need verification. Ignore repeated status language when the underlying state did not change.

Quality check Every reported change must contain before-and-after evidence and a stated consequence.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

05 End-of-day closure

Category: Morning command centre | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Close my workday for [DATE]. Compare this morning's priorities with email, Teams activity, meetings and task updates completed today. Return: outcomes completed, decisions made, commitments created, items moved with a reason, unresolved blockers, people awaiting my response and the first action for tomorrow. Identify any promise I made today that has no task or calendar protection. Do not treat attendance at a meeting as an outcome unless it produced a decision or deliverable.

Quality check Every open loop must have an owner, next action and retrieval point for tomorrow.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

06 Priority inbox triage

Category: [Inbox intelligence](#) | Surface: [Outlook Copilot](#) | Mode: [Chat](#)

Triage unread email received between [START] and [END]. Place each actionable thread into one category: ACT NOW, TODAY, THIS WEEK, WAITING, REFERENCE or NOISE. Use deadline, business consequence, explicit request and dependency to determine priority. For ACT NOW and TODAY, state the exact ask, sender, deadline, risk of delay and suggested next action. Collapse duplicate messages into one conversation and use the newest message to determine current status. Do not infer urgency from words such as urgent without a concrete consequence.

Quality check Each high-priority thread must contain an explicit ask or a documented consequence of delay.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

07 Waiting on me

Category: [Inbox intelligence](#) | Surface: [Outlook Copilot](#) | Mode: [Chat](#)

Find email conversations from the last [NUMBER] days where another person is waiting for something from me. Look for explicit requests, unanswered questions, promised documents, approvals and follow-ups I said I would provide. Exclude threads where I responded later, the requester withdrew the ask or another owner accepted it. Return one row per open commitment with the exact evidence, age, promised date, consequence, smallest completion action and a draft response when useful.

Quality check Every item must prove both the outstanding ask and the absence of a later resolution.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

08 Waiting on others

Category: [Inbox intelligence](#) | Surface: [Outlook Copilot](#) | Mode: [Chat](#)

Find commitments that other people made to me in email during [DATE RANGE] and that remain unresolved. Distinguish a firm commitment from a suggestion or courtesy phrase. For each open item, show who committed, the exact deliverable, promised date, the thread's latest status, my dependency on it and a tactful follow-up draft. Do not flag an item if a later message supplies the deliverable, changes the date with my agreement or transfers ownership.

Quality check Every follow-up must cite the original commitment and account for the latest reply in the thread.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

09 Reply batch with tone control

Category: [Inbox intelligence](#) | Surface: [Outlook Copilot](#) | Mode: [Draft-and-approve](#)

For the email threads I select, draft one reply per thread. First identify the sender's ask and the latest valid context. Use these tone rules: concise and decisive for approvals, warm and specific for recognition, calm and evidence-led for disagreement, and direct but respectful for overdue commitments. Preserve names, dates, numbers and attachments exactly. Ask me one question when a missing fact could materially change a reply. Keep every draft separate and label the thread it belongs to.

Quality check Each draft must answer the actual latest ask and must not invent commitments, dates or attachments.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

10 Mailbox clean-up plan

Category: [Inbox intelligence](#) | Surface: [Outlook Copilot](#) | Mode: [Draft-and-approve](#)

Analyze email received during [DATE RANGE] and propose a mailbox clean-up plan without moving anything. Group senders and message types into: keep in inbox, project folder, reference archive, automated notification, newsletter, duplicate alert and possible unsubscribe. Show volume, last useful message, risk of hiding future action and a proposed Outlook rule for repeated low-value mail. Protect messages that contain approvals, commitments, legal records or unresolved requests even when they are old.

Quality check The plan must identify false-positive risks and preserve every unresolved commitment before proposing a rule.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

11 Missed meeting catch-up

Category: Meeting intelligence | Surface: Teams Copilot | Mode: Chat

I missed [MEETING]. Use the transcript, chat, shared files and any follow-up email to reconstruct what I need to know. Return the purpose, decisions with evidence, actions with explicit owners and dates, disagreements, questions left open, changes from the pre-read and anything assigned to me. Separate statements made during discussion from final decisions. End with a 90-second catch-up and the one question I should ask before acting.

Quality check A decision must have clear closing evidence, and ownership must come from an explicit statement.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

12 Pre-meeting decision brief

Category: Meeting intelligence | Surface: Teams Copilot | Mode: Chat

Prepare me for [MEETING] using the invitation, agenda, related email, previous meeting notes and the latest shared documents. Identify the decision the meeting must produce, the current options, unresolved evidence, stakeholder positions, commitments carried forward and the consequence of no decision. Give me an opening statement, five high-value questions and a recommended decision path. Flag sources older than [DATE] that may no longer reflect current state.

Quality check The brief must distinguish decisions required in this meeting from background discussion.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

13 Decision memory from meeting

Category: Meeting intelligence | Surface: Teams Copilot | Mode: Chat

Convert [MEETING] into a decision record. For each decision, capture the decision statement, alternatives considered, rationale, evidence cited, dissent, decision owner, effective date, review trigger and transcript timestamp. Record proposed ideas separately from accepted decisions. If participants disagree about whether a decision was made, label it DISPUTED and quote the closing exchange instead of resolving it yourself.

Quality check A reviewer must be able to trace every recorded decision to a timestamp and distinguish it from a proposal.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

14 Meeting contradiction scan

Category: Meeting intelligence | Surface: Teams Copilot | Mode: Chat

Compare the transcript, meeting chat, pre-read and follow-up email for [MEETING]. Find contradictions in dates, ownership, scope, metrics, decisions and next steps. For each contradiction, display both claims with source and timestamp, identify whether a later statement supersedes an earlier one and name the person who can resolve the conflict. Ignore differences in wording when the meaning is equivalent.

Quality check Every contradiction must contain two incompatible claims, not merely two differently worded statements.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

15 Meeting follow-up pack

Category: Meeting intelligence | Surface: Teams Copilot | Mode: Draft-and-approve

Create a follow-up pack for [MEETING]. Include a six-line executive recap, confirmed decisions, an action table with owner and date, unresolved questions, risks, links to referenced files and a draft follow-up message. Highlight actions assigned to absent participants or owners who did not explicitly accept them. Preserve the terminology used in the meeting and keep the message under [WORD COUNT] words.

Quality check No action may appear as confirmed unless the transcript or follow-up explicitly establishes its owner.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

16 Stakeholder briefing

Category: Stakeholder radar | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Prepare a briefing on [PERSON] for my next interaction. Use our email, Teams conversations, meetings and shared documents from [DATE RANGE]. Summarize their current priorities, decisions they own, commitments between us, open disagreements, preferred communication pattern and the most recent material change. Include five evidence-backed conversation points and one topic I should verify rather than assume. Exclude personal or sensitive information unrelated to work.

Quality check Every claimed priority or preference must be supported by repeated behavior or an explicit statement.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

17 Relationship attention radar

Category: Stakeholder radar | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Review interactions with [STAKEHOLDER LIST] during [DATE RANGE]. Identify relationships that need attention because of an overdue commitment, unresolved disagreement, long silence on an active dependency, upcoming decision or missing recognition. Do not rank people by message volume alone. For each signal, show the evidence, business reason, recommended contact and a specific opening line. Separate a real relationship risk from normal low-frequency collaboration.

Quality check Each recommendation must connect a relationship signal to a current work consequence.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

18 People I owe

Category: Stakeholder radar | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Find commitments I made to [PEOPLE OR TEAM] across email, Teams and meetings during [DATE RANGE]. Capture the exact promise, date made, expected delivery, current evidence of completion and whether I communicated a delay. Remove commitments that were cancelled, transferred or completed. Group the remainder as overdue, due soon or undated, then propose the smallest next action and a transparent status message for each.

Quality check Every item must quote my commitment and check later sources for completion or renegotiation.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

19 Delegated work follow-up

Category: Stakeholder radar | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Track work I delegated during [DATE RANGE]. Use meeting actions, email and Teams messages to identify the delegate, expected outcome, agreed date, dependencies, latest evidence and whether the person accepted the work. Classify each item as on track, at risk, blocked, overdue or unclear. Draft a supportive follow-up that asks for evidence and help needed without taking the work back from the owner.

Quality check Status must depend on evidence against the agreed outcome and date, not communication frequency.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

20 Recognition opportunities

Category: Stakeholder radar | Surface: Microsoft 365 Copilot Chat | Mode: Draft-and-approve

Find work during [DATE RANGE] that deserves specific recognition. Look for delivered outcomes, difficult blockers removed, customer praise, quality improvements, help given across teams and quiet follow-through. For each candidate, cite the evidence, explain the impact and draft a two-sentence recognition note that names the contribution without exaggeration. Exclude routine activity and avoid revealing confidential metrics or project details.

Quality check Every recognition note must name a concrete contribution and supported impact.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

21 Cross-source project status

Category: Project control tower | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Build the current status of [PROJECT] from its Teams channel, project email, latest meeting transcripts, Planner tasks and named files. Return outcome progress, decisions, milestones, blockers, dependencies, risks and changes since [PRIOR DATE]. Resolve status using the newest authoritative source and display disagreements instead of averaging them. For each red or amber item, state the evidence, owner, next decision and date when the status should be reviewed.

Quality check Every status must cite a current source and expose conflicting reports from different channels.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

22 Aging decision queue

Category: Project control tower | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Find unresolved decisions for [PROJECT OR PORTFOLIO] that first appeared before [AGE THRESHOLD]. Search decision logs, meeting notes, email and Teams. For each decision, show the question, date raised, accountable decision maker, options, missing evidence, downstream work blocked and last recorded movement. Exclude decisions that a later source closed or replaced. Rank by cost of continued delay.

Quality check Age must start from the first explicit decision request, and closure must be checked in newer evidence.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

23 Blocker dependency network

Category: Project control tower | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Map blockers for [PROJECT] as a dependency network. For each blocker, identify the blocked outcome, prerequisite, owner, expected resolution date, evidence, related blockers and the consequence if it slips. Distinguish a true dependency from a concern that does not prevent progress. Identify the blocker with the highest downstream impact and propose the smallest escalation or decision that could release it.

Quality check Every dependency link must explain exactly what cannot proceed and why.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

24 Project evidence map

Category: Project control tower | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Create an evidence map for the latest [PROJECT] status report. Break each headline claim into measurable subclaims. Link each subclaim to the email, meeting, task, workbook or document that supports it, including date and owner. Mark claims as supported, partly supported, stale, contradicted or unsupported. Identify evidence that is duplicated across sources but originates from the same unverified statement.

Quality check No green status or milestone claim may remain without dated, independent supporting evidence.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

25 Leadership portfolio update

Category: Project control tower | Surface: PowerPoint Copilot | Mode: Draft-and-approve

Create a one-page leadership portfolio update for [PROJECT LIST] using their latest approved status sources. Show business outcome, current stage, material change, next milestone, decision required and top risk for each project. Add a portfolio view of shared dependencies and capacity conflicts. Keep delivery activity in an appendix unless it changes outcome or risk. Use red, amber and green only when the project evidence defines the threshold.

Quality check Every project must show a material change or explicitly state that no material change occurred.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

26 Meeting value audit

Category: Calendar and focus | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Audit recurring meetings on my calendar over [DATE RANGE]. For each series, examine purpose, attendance, transcript outcomes, decisions, actions and repeated agenda content. Classify it as keep, shorten, reduce frequency, replace asynchronously, redesign or stop. Estimate time recovered and identify the collaboration risk of changing it. Protect meetings required for governance, people leadership or decisions even when they produce few written actions.

Quality check Every recommendation must use evidence from at least two occurrences of the series.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

27 Deep-work protection

Category: Calendar and focus | Surface: Outlook Copilot | Mode: Draft-and-approve

Review my calendar for [WEEK] and find two realistic deep-work blocks for [PRIORITY OUTCOME]. Protect blocks of at least [DURATION] minutes, accounting for preparation, travel, time zones and recovery after high-intensity meetings. Identify movable meetings using organizer, attendance and urgency evidence. Propose calendar changes with the tradeoff for each, but do not move anything. If no suitable block exists, show which commitment must be renegotiated.

Quality check The proposed schedule must fit actual free time and state the cost of every meeting change.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

28 Next-week load test

Category: Calendar and focus | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Stress-test my workload for [NEXT WEEK]. Combine calendar duration, preparation time, known deliverables, tasks, follow-ups and deadlines. Estimate committed hours and compare them with available working time. Show overload by day, collisions between deadlines and meetings, work with no protected time and the three best de-scoping or delegation choices. Use ranges when effort is uncertain and show the assumption.

Quality check The capacity calculation must include meeting preparation and task effort, not calendar hours alone.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

29 Agenda readiness check

Category: Calendar and focus | Surface: Teams Copilot | Mode: Chat

Review meetings in the next [NUMBER] working days. Flag meetings that lack one or more of these: clear purpose, decision owner, required pre-read, attendee role, agenda, current data or enough preparation time. For each flagged meeting, explain the gap, the consequence and the exact question or document needed. Separate informational meetings from decision meetings so they do not share the same readiness standard.

Quality check Every readiness gap must be tied to the meeting's stated purpose or required decision.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

30 Calendar conflict decision

Category: Calendar and focus | Surface: Outlook Copilot | Mode: Chat

Resolve conflicts among the selected calendar events. Compare my role, decision importance, replaceability, preparation already invested, relationship consequence and whether a delegate or recording can cover me. Recommend attend, delegate, shorten, reschedule or decline for each event. Explain the tradeoff and draft a transparent message for any proposed change. Do not assume the meeting with the most senior attendee automatically wins.

Quality check The recommendation must explain what outcome is protected and what risk the rejected option creates.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

31 Word executive brief

Category: Microsoft 365 creation | Surface: Word Copilot | Mode: Draft-and-approve

Create a two-page executive brief in Word from [NAMED SOURCES]. Page one must contain the decision required, recommendation, evidence, material risks and immediate next step. Page two must contain alternatives, assumptions, unresolved questions and source notes. Preserve all verified dates and numbers. Convert long background into an appendix and mark any claim that lacks a source. Use headings and a decision table that remain editable in Word.

Quality check An executive must be able to identify the decision, rationale and unresolved risk from page one alone.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

32 PowerPoint narrative architect

Category: Microsoft 365 creation | Surface: PowerPoint Copilot | Mode: Draft-and-approve

Design a [SLIDE COUNT]-slide PowerPoint story from [NAMED SOURCES] for [AUDIENCE]. Start with the decision or tension, then show evidence, options, recommendation, risk and action. For every slide, provide a takeaway title, one visual composition, required evidence and a read-aloud speaker note. Replace bullet-only layouts with timelines, comparisons, process diagrams, native charts or a single strong statement. Use Arial throughout and preserve source citations in notes.

Quality check Every slide must have one clear purpose, a visual form suited to the content and evidence for its main claim.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

33 Excel anomaly and decision narrative

Category: Microsoft 365 creation | Surface: Excel Copilot | Mode: Chat

Analyze [TABLE OR RANGE] in Excel. Profile missing values and outliers, then identify the five anomalies most likely to change a business decision. For each anomaly, show the affected rows, calculation, comparison baseline, possible data-quality explanation and business interpretation. Create an editable summary table and the most suitable native chart. Keep correlation separate from causation and recommend a validation step before action.

Quality check Every anomaly must be reproducible from workbook values and formulas, with uncertainty clearly separated from fact.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

34 Loop decision log

Category: Microsoft 365 creation | Surface: Loop Copilot | Mode: Draft-and-approve

Create an editable Loop decision log from [MEETINGS AND FILES]. Use columns for decision, status, date, owner, rationale, alternatives, supporting evidence, dissent, review trigger and superseded decision. Populate only decisions that have explicit closing evidence. Add a linked action section for implementation work, but keep actions separate from decisions. Highlight entries that lack an owner or review trigger.

Quality check Every decision row must link to its source and retain any superseded decision instead of deleting history.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

35 OneNote learning synthesis

Category: Microsoft 365 creation | Surface: OneNote Copilot | Mode: Draft-and-approve

Turn the selected OneNote pages, meeting notes and files into a durable knowledge note on [TOPIC]. Organize it as central idea, evidence, worked example, assumptions, contradictions, practical application, questions to revisit and source links. Remove duplicated notes while preserving unique evidence. Create five retrieval questions and a review date based on how quickly the information may become stale.

Quality check The note must remain understandable without reopening every source and must expose unresolved contradictions.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

36 Adaptive tutor from work documents

Category: Learning and study | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Tutor me on [TOPIC] using only [NAMED WORK DOCUMENTS]. Begin with five diagnostic questions that test application rather than recognition. Build the next question from my previous answer. When I am wrong, identify the misconception, cite the relevant passage, explain the principle in plain language and give a different scenario to test transfer. Do not reveal the answer before I commit. Finish with a mastery map and the smallest next study block.

Quality check Question difficulty must adapt to my demonstrated gaps and every correction must cite the supplied material.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

37 Misconception tracker

Category: Learning and study | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Review my answers in [NAMED QUIZ OR NOTES]. For each incorrect or weak answer, record the underlying principle, my apparent reasoning, the cue I missed, the corrected rule and a new discriminating question. Group repeated mistakes by root misconception rather than by document section. Rank misconceptions by likelihood of recurrence and consequence if applied at work.

Quality check Each new question must test the principle in a different context instead of repeating the original wording.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

38 Spaced recall schedule

Category: Learning and study | Surface: Outlook Copilot | Mode: Draft-and-approve

Create a spaced recall schedule for [TOPIC] ending on [DATE]. Use my calendar, existing commitments and current mastery evidence. Schedule short retrieval sessions at expanding intervals, with extra practice for high-risk misconceptions. Each session must name the concept, retrieval question, expected evidence of mastery and rule for advancing or repeating it. Propose calendar holds but do not create them.

Quality check The schedule must fit real calendar capacity and adapt interval length to demonstrated recall.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

39 Mock oral examiner

Category: Learning and study | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Conduct a mock oral examination on [TOPIC] using [NAMED SOURCES]. Ask one question at a time. Follow vague answers with a request for mechanism or evidence. Introduce a counterexample after a correct answer and test whether I can transfer the principle. Score accuracy, reasoning, evidence use and uncertainty from 0 to 2 after each response. End with the three misconceptions that most limit my readiness.

Quality check The examination must respond to my answers and test transfer, not follow a fixed list.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

40 Teach-back evaluator

Category: Learning and study | Surface: Microsoft 365 Copilot Chat | Mode: Chat

I will teach [TOPIC] in my own words. Evaluate my explanation against [NAMED SOURCES]. Do not rewrite it immediately. First identify accurate ideas, missing mechanisms, unsupported claims, confusing language and one question a beginner would still ask. Then ask me to repair the weakest section. After my revision, score clarity, correctness, completeness and practical transfer, citing the source for every correction.

Quality check The evaluation must preserve my voice while correcting only evidence-backed gaps.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

41 Weekly memory compression

Category: [Memory and reflection](#) | Surface: [Microsoft 365 Copilot Chat](#) | Mode: [Chat](#)

Compress my work from [WEEK] into a memory packet for next week. Include decisions that remain valid, commitments still open, delegated work, stakeholder context, lessons, rejected assumptions and evidence likely to expire. Assign each item REMEMBER, EXPIRE ON [DATE], REVISIT WHEN [EVENT] or FORGET. Preserve source links and explain why each item deserves memory. Exclude routine activity with no future decision value.

Quality check A future session must recover every live commitment without reviving superseded assumptions.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

42 Decision journal

Category: Memory and reflection | Surface: OneNote Copilot | Mode: Draft-and-approve

Create a decision-journal entry for [DECISION] from the selected evidence. Record the decision, date, owner, context, alternatives, expected outcome, strongest counterargument, assumptions, confidence and signals that should trigger review. Add a section called What would change my mind and schedule a proposed review date based on the earliest uncertain assumption. Do not rewrite history using later outcomes.

Quality check The entry must capture what was knowable at decision time and separate it from hindsight.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

43 Remember, forget, expire, revisit

Category: [Memory and reflection](#) | Surface: [Microsoft 365 Copilot Chat](#) | Mode: [Chat](#)

Classify the selected notes, messages and decisions for memory. Use REMEMBER for stable reusable context, FORGET for sensitive scratch work or rejected hypotheses, EXPIRE for time-bound state, and REVISIT for open issues triggered by a date or event. For each item, include provenance, owner, confidence, valid-from date and reason for the lifecycle choice. Flag conflicts between a proposed memory and newer evidence.

Quality check No memory may persist without provenance, purpose and a rule for expiry or review.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

44 Commitment roll-forward

Category: Memory and reflection | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Roll unfinished commitments from [CURRENT PERIOD] into [NEXT PERIOD]. Verify each commitment against the latest email, Teams conversation, meeting and task state. Mark completed, cancelled, transferred, renegotiated or still open. For open items, retain the original promise, current owner, revised date only when agreed, blocker and next action. Do not silently move an overdue date forward.

Quality check Every rolled commitment must preserve its original date and the evidence for any change.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

45 Monthly work-pattern review

Category: [Memory and reflection](#) | Surface: [Microsoft 365 Copilot Chat](#) | Mode: [Chat](#)

Analyze my work patterns during [MONTH] using calendar, sent email, meetings and completed tasks. Identify where time produced decisions or deliverables, where coordination repeated without progress, which stakeholders consumed reactive attention, and which commitments repeatedly slipped. Compare planned priorities with observed allocation. Propose three behavior experiments for next month with a measurable signal and stopping rule.

Quality check Each pattern must use repeated evidence and every experiment must define how success will be measured.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

46 Executive status in one screen

Category: Leadership communication | Surface: PowerPoint Copilot | Mode: Draft-and-approve

Create a single-slide executive status for [INITIATIVE] from [NAMED SOURCES]. Show the intended outcome, current state, material change since the last update, decision needed, top risk and next milestone. Use one visual composition rather than bullets. Keep supporting detail in speaker notes with source links. If evidence conflicts, show the conflict on the slide instead of selecting the more positive version.

Quality check A leader must understand the change, consequence and decision within 30 seconds.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

47 Difficult conversation preparation

Category: Leadership communication | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Prepare me for a difficult conversation with [PERSON] about [ISSUE]. Use only work evidence I select. Separate observable facts from my interpretation, identify the shared outcome, anticipate the strongest fair perspective from the other person and show where evidence is incomplete. Draft an opening that is direct and respectful, five listening questions, one clear request and responses to likely objections. Avoid diagnosing motive or personality.

Quality check Every concern must rest on observable work evidence and every request must be specific and actionable.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

48 Delegation brief

Category: Leadership communication | Surface: Word Copilot | Mode: Draft-and-approve

Create a delegation brief for [OUTCOME]. Define why the outcome matters, what good looks like, decision rights, constraints, available evidence, milestones, check-in points and situations that require escalation. Separate the outcome from the method so the owner retains autonomy. Include a short confirmation section where the delegate can restate understanding and surface missing capacity or dependencies.

Quality check The brief must make accountability and authority equally clear without prescribing unnecessary steps.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

49 Board or steering Q and A

Category: Leadership communication | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Using [NAMED SOURCES], generate the 12 hardest questions a board or steering committee could ask about [PROPOSAL]. Cover evidence, economics, delivery, risk, alternatives, governance and failure conditions. For each, draft a concise answer, cite the evidence, state what remains unknown and name the follow-up owner. Include two questions that challenge the recommendation's central assumption rather than its implementation details.

Quality check Every answer must distinguish supported fact from management judgment and avoid invented certainty.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

50 Strategy memo with answer flip

Category: Leadership communication | Surface: Word Copilot | Mode: Draft-and-approve

Write a strategy memo for [DECISION] from [NAMED SOURCES]. State the recommendation, strategic rationale, alternatives, evidence, assumptions, execution implications and risks. Add a section called Answer Flip that names the smallest plausible fact that would reverse the recommendation, why it controls the decision and the cheapest verification. End with the decision required now and the review trigger.

Quality check The reversing fact must genuinely change the recommendation when inserted into the original evidence.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

51 Scheduled morning brief

Category: Cowork automation | Surface: Microsoft 365 Copilot Cowork | Mode: Scheduled

Every working day at [TIME], prepare a private morning brief covering email received since the previous run, today's meetings, tasks due within seven days, commitments I owe and work blocked by me. Show only items with an explicit ask, deadline, decision or consequence. Deduplicate conversations and verify current status using the newest source. Keep the output as a draft briefing with source links and a section called Possible misses when access is incomplete.

Quality check For the first ten runs, compare the brief with manual review and record false priorities and missed commitments.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

52 Scheduled weekly portfolio review

Category: Cowork automation | Surface: Microsoft 365 Copilot Cowork | Mode: Scheduled

Every [DAY] at [TIME], prepare a portfolio review for [PROJECT LIST]. Use each project's approved status source, recent meetings, project channel and tasks. Report material changes, decisions overdue, milestones at risk, cross-project dependencies and commitments carrying into next week. Do not repeat unchanged detail. Link every changed status to evidence and place conflicts in a validation queue.

Quality check Audit the first four runs against project-owner updates and track missed changes, stale status and false escalation.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

53 Manager email trigger

Category: Cowork automation | Surface: Microsoft 365 Copilot Cowork | Mode: Event-driven

When I receive an email from [MANAGER] that contains an explicit request, decision question or deadline, create a private task proposal. Capture the exact ask, source message, due date, related project, evidence needed and suggested first action. If the message is FYI, a newsletter or lacks an ask, do nothing. If ownership is ambiguous, place it in a review queue instead of creating a task.

Quality check Test the trigger on 20 historical messages and measure false triggers, missed explicit asks and due-date accuracy.

Approval boundary Do not create the task or send a reply until I approve the extracted ask, owner and date.

54 Teams mention trigger

Category: Cowork automation | Surface: Microsoft 365 Copilot Cowork | Mode: Event-driven

When I am mentioned in Teams, evaluate whether the message contains a direct question, approval request, blocker, deadline or commitment that requires me. Ignore social mentions, broad channel announcements and messages already answered later in the thread. For a true action, prepare a private card with context, exact ask, deadline, consequence and draft response. Group repeated mentions from the same conversation.

Quality check Test on recent mentions and report precision for actionable mentions plus every false suppression of a real request.

Approval boundary Do not post in Teams or create a task until I approve the proposed action.

55 OneDrive and SharePoint organizer

Category: Cowork automation | Surface: Microsoft 365 Copilot Cowork | Mode: Draft-and-approve

Review [NAMED ONEDRIVE OR SHAREPOINT LOCATION] and propose an organization plan. Identify duplicates, obsolete drafts, orphaned files, inconsistent names, missing owners and documents placed outside the expected project structure. For every proposed move, rename or archive action, show the current path, proposed path, reason, linked references and collaboration risk. Exclude retention-controlled, legal or permission-sensitive content from automatic action.

Quality check The change plan must be reversible and must identify links, permissions or workflows that a move could break.

Approval boundary Do not move, rename, archive, delete or change permissions until I approve the exact file-level plan.

56 Evidence-led LinkedIn post

Category: Career and visibility | Surface: Word Copilot | Mode: Draft-and-approve

Draft a LinkedIn post about [ACHIEVEMENT] using only [NAMED SOURCES]. Identify the real problem, the contribution I can truthfully claim, the people or team to credit, the measurable outcome and one lesson useful to others. Remove confidential names, numbers and internal details. Write in my natural voice using short paragraphs and a strong first two lines. Avoid generic celebration language and unsupported superlatives.

Quality check Every achievement claim must trace to evidence, and the post must give readers a practical insight beyond the announcement.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

57 Career evidence inventory

Category: Career and visibility | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Build a career evidence inventory from [NAMED REVIEWS, EMAILS, PRESENTATIONS AND PROJECT FILES]. Create entries for outcomes delivered, difficult problems solved, leadership demonstrated, capabilities built, recognition received and reusable intellectual property. For each entry, capture date, role, action, evidence, measurable result, collaborators and confidentiality level. Separate verified impact from my interpretation.

Quality check No accomplishment may enter the inventory without a source and a clear description of my contribution.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

58 Career narrative

Category: Career and visibility | Surface: Word Copilot | Mode: Draft-and-approve

Using my career evidence inventory, write a career narrative for [TARGET ROLE OR AUDIENCE]. Identify the recurring problems I solve, how my scope has grown, the evidence of impact and the capabilities that differentiate me. Use three representative stories rather than a chronology of every role. State one growth edge honestly and connect it to a current development action. Remove confidential details and inflated claims.

Quality check Every theme must be supported by more than one evidence entry, and every story must clarify my specific contribution.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

59 Network follow-up

Category: Career and visibility | Surface: Outlook Copilot | Mode: Draft-and-approve

Review my interactions with [PERSON OR LIST] and prepare a thoughtful follow-up. Summarize the last meaningful exchange, any promise I made, topics they care about and a concrete reason to reconnect now. Draft a short message that contributes something useful, such as an insight, introduction or relevant update. Do not pretend familiarity that the history does not support and do not use a generic checking-in message.

Quality check The follow-up must reference a real shared context and offer specific value without inventing closeness.

Approval boundary Return a draft for my review. Do not send, schedule, assign, move, delete or change shared content.

60 Personal development experiment

Category: Career and visibility | Surface: Microsoft 365 Copilot Chat | Mode: Chat

Design a four-week development experiment for [CAPABILITY]. Use feedback from [NAMED SOURCES], upcoming work and my calendar. Define the behaviour to practice, situations where I can apply it, weekly repetitions, evidence to collect, a peer feedback question and a stopping or adaptation rule. Keep the experiment small enough to run during real work and separate learning activity from evidence of changed behaviour.

Quality check Success must depend on observed behaviour and feedback, not course completion or hours studied.

Approval boundary Create the briefing only. Do not contact anyone or change any Microsoft 365 item.

Personal AI OS summary

Responsibility	What the prompts do	Examples
Observe	Find changes, requests, commitments and evidence	Inbox, missed meetings, status reconstruction
Prepare	Create decision-ready briefs and drafts	Pre-reads, executive updates, Q and A
Act	Coordinate documents, calendar proposals and tasks	Meeting packs, creation prompts, Cowork tasks
Follow through	Track waiting items, delegated work and expiry	Decision queue, weekly memory, scheduled reviews
Learn	Adapt study to demonstrated gaps	Tutor, misconception tracker, oral exam

Capabilities depend on tenant configuration, licensing, permissions and feature availability. Verify current Microsoft documentation before delivery.
